EXPERIENCE

Robotics Operations & Software Support Engineer - R.O.B.O. Apr 2026 - Present

- Monitor production robotic systems through real-time telemetry, logs, connectivity, and task-execution data, identifying anomalies and performing root-cause analysis across robot, server, and software components.
- Support integrations among autonomous robots, backend servers, warehouse management systems, and software services using APIs, scripts, Linux/Unix diagnostics, and CLI tooling.
- Develop and maintain Python/Node.js automation utilities for diagnostics, data extraction, and operational reporting; validate system changes and escalate incidents with actionable logs and technical context.

Software Engineer - Brillio Technologies Jan 2026 - Apr 2026

- Designed and implemented distributed contact-routing systems with Amazon Connect supporting 200+ agents and ~5K daily requests, strengthening reliability and fault tolerance under production workloads.
- Built event-driven IVR workflows integrated with Amazon Lex (NLP), enabling intelligent request routing and improving automated resolution efficiency in a cloud-based environment.
- Analyzed production call flows and service interactions to diagnose routing failures and improve operational resilience across customer-contact workflows.

Software Engineer - Deloitte May 2025 - Dec 2025

- Developed and optimized Node.js backend microservices in Linux environments, reducing API latency by ~25% and improving throughput under concurrent workloads.
- Built React application components and REST API integrations and implemented CI/CD workflows, improving deployment automation, scalability, and system reliability.
- Collaborated across application and backend layers to troubleshoot production issues, improve service behavior, and deliver maintainable software changes.

Student Software Developer - Concordia University Makerspace Lab Jan 2024 - May 2025

- Designed and deployed a full-stack application used by 100+ university users for daily operational workflows, improving process efficiency by ~40%.
- Developed scalable backend services and optimized database workflows, reducing response time by ~30% while maintaining 99% system availability.
- Translated operational requirements into maintainable application features and supported production usage across the university makerspace environment.

Web Developer Intern - Splash Distributors LLC May 2023 - Dec 2023

- Developed and maintained the company web platform with inventory synchronization and automated product-publishing workflows, reducing manual update effort by ~30% and improving data consistency.
- Built responsive promotional and event experiences and iterated on application functionality based on evolving business requirements.

Software Engineer - Tata Consultancy Services (TCS) Jan 2022 - Jan 2023

- Developed and maintained backend systems for high-volume enterprise applications, optimizing transaction-processing workflows and improving application performance by ~20%.
- Implemented encryption, authentication, and role-based access control (RBAC), reducing security-related access issues by ~25% and strengthening enterprise security and compliance.
- Debugged application and transaction issues across backend workflows, contributing production fixes and maintainable enhancements in an enterprise engineering environment.

PROJECTS

GKLink URL Shortener - Next.js, Redis, Rate Limiting Live

- Built GKLink, a full-stack URL shortening platform with a Next.js frontend and backend API for creating and resolving short links with persistent database storage.
- Implemented Redis caching and rate limiting to keep redirects fast and reliable while protecting the service from abusive request traffic; deployed live at gklink.ganesh-krishna.com.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript
Frontend: React, Next.js, HTML, CSS
Backend: Node.js, REST APIs, Microservices, Redis, Rate Limiting, API Integration
Cloud & DevOps: AWS (EC2, S3, CloudFront, Amazon Connect), Docker, CI/CD, Linux/Unix
AI/ML: Scikit-learn, NLP, Generative AI, Amazon Lex
Core CS: Data Structures & Algorithms, Distributed Systems, Database Systems, OOP

LEADERSHIP & EDUCATION

Leadership: Founded and led a 6-member DSA study group focused on structured daily problem solving; organized and participated in hackathons during undergraduate study.

M.S. Computer & Information Sciences - Concordia University Wisconsin May 2025

B.Tech. Computer Science - Aurora's Technological & Research Institute Jun 2022
